

Week 2 – Compute & Storage

AWS Assignment Submission & Practical Evidence

Assignment 1 — Launch and Configure an EC2 Instance

Requirements

- Launch an Ubuntu server.
- Install Apache or Nginx and host a simple website.

1. EC2 Instance Launched

The AWS EC2 console shows the SkillNexis-EC2 instance in the Running state.

Figure 1 — EC2 instance running in the AWS console.

2. Connected to the Ubuntu Instance

The terminal confirms access to the Ubuntu EC2 server and shows the Linux environment.

Figure 2 — Connected Ubuntu EC2 instance.

3. Apache Web Server Installed and Running

Apache HTTP Server is shown as active and running on the Ubuntu EC2 instance.

```
aws
[Alt+S]
Aditya Shukla (787308165679)
Aditya Shukla

Enabling site 000-default.
Created symlink '/etc/systemd/system/multi-user.target.wants/apache2.service' -> '/usr/lib/systemd/system/apache2.service'.
Created symlink '/etc/systemd/system/multi-user.target.wants/apache-htcacheclean.service' -> '/usr/lib/systemd/system/apache-htcacheclean.service'.

Scanning linux images...

Running kernel seems to be up-to-date.

No services need to be restarted.

No containers need to be restarted.

No user sessions are running outdated binaries.

No VM guests are running outdated hypervisor (qemu) binaries on this host.
ubuntu@ip-172-31-24-204:~$ sudo systemctl status apache2
sudo systemctl status apache2
Unit apache2.service could not be found.
Unit systemctl.service could not be found.
Unit status.service could not be found.
● apache2.service - The Apache HTTP Server
   Loaded: loaded (/usr/lib/systemd/system/apache2.service; enabled; preset: enabled)
   Active: active (running) since Fri 2026-10-02 11:04:11 UTC; 25s ago
   Invocation: 7ec32c9dd79a42b7a16b4c62df57d8c6
   Docs: https://httpd.apache.org/docs/2.4/
   Main PID: 2422 (apache2)
   Status: "Total requests: 0; Idle/Busy workers 100/0; Requests/sec: 0; Bytes served/sec: 0 B/sec"
   Tasks: 55 (limit: 627)
   Memory: 5.8M (peak: 5.8M)
   CPU: 88ms
   CGroup: /system.slice/apache2.service
           └─2422 /usr/sbin/apache2 -k start -DFOREGROUND
             └─2438 /usr/sbin/apache2 -k start -DFOREGROUND
               └─2439 /usr/sbin/apache2 -k start -DFOREGROUND

Oct 02 11:04:10 ip-172-31-24-204 systemd[1]: Starting apache2.service - The Apache HTTP Server...
Oct 02 11:04:11 ip-172-31-24-204 systemd[1]: Started apache2.service - The Apache HTTP Server.
```

Figure 3 — Apache service active on the EC2 instance.

4. Website Served from EC2

The browser successfully displays the website hosted by the Apache web server on the EC2 instance.

Figure 4 — Website successfully served from EC2.

Assignment 2 — S3 Static Website Hosting

Requirements

- Create an S3 bucket and host an HTML/CSS website.
- Configure permissions for public access.

5. Website File Uploaded to S3

The S3 upload status confirms that the website file was successfully uploaded to the bucket.

Figure 5 — HTML file successfully uploaded to the S3 bucket.

6. S3 Static Website Successfully Hosted

The browser displays the static webpage served from the Amazon S3 website endpoint.

Figure 6 — Static website hosted using Amazon S3.

7. Public Access Configured with Bucket Policy

The S3 bucket settings show Block all public access disabled and a bucket policy granting public s3:GetObject access to objects in the bucket.

Figure 7 — S3 bucket policy configured for public object access.

Submission Summary: Both Week 2 assignments have been completed and documented with AWS console, terminal, and browser evidence. This document covers only the two assignments; the separate mini project is intentionally excluded.
